

CLAIMS

What is claimed is:

1. A scent delivery system comprising:
 - at least a tube-like chamber having a first outlet and a second outlet; wherein a suction applied at, on or about an outlet induces a flow of liquid pulled from a liquid reservoir through said first and second outlet as well as said tube-like chamber;
 - a scent source means.
2. The scent delivery system of claim 1, wherein:
 - said at least a tube-like chamber is of a synthetic material;
 - said scent source means is in removable contact with said tube-like chamber.
3. The scent delivery system of claim 2, wherein:
 - said at least a tube-like chamber synthetic material is plastic;
 - said scent source means in removable contact with said at least a tube-like chamber is a body having a first outlet and a second outlet, thereby permitting said at least a tube-like chamber to be inserted therethrough.
4. The scent delivery system of claim 3, wherein:
 - means for maintaining said scent source means in contact with said at least a tube-like chamber at least an engineered design, whereby the inner diameter of said scent source means is narrower than the outer diameter of said at least a tube-like chamber.
5. The scent delivery system of claim 4, wherein:

said scent source means is in removable contact with
 said at least a tube-like chamber is an elongated plastic strip
 impregnated with at least an essential oil;
 wherein said elongated strip is attached to said at least a tube-like
 chamber via at least an engineered design, whereby said elongated
 plastic strip has attaching-grip means integrally molded thereto.

6. The scent delivery system of claim 2, wherein:

 said scent source means in removable contact with
 said at least a tube-like chamber is an elongated plastic strip
 impregnated with at least an essential oil including means to
 attach said elongated strip to said at least a tube-like chamber.

7. The scent delivery system of claim 1, wherein:

 said at least a tube-like chamber is of a synthetic material;
 said scent source means is an integral combination of
 at least one essential oil integrally pervading said synthetic
 material used in the production of said tube-like chamber.

8. The scent delivery system of claim 9, wherein:

 said at least a tube-like chamber synthetic material is plastic;
 said scent delivery system is enclosed within means to prevent
 said scent from substantially dissipating until such time that
 release of said scent is deemed desirable.

9. The scent delivery system of claim 10, wherein:

 said means to prevent said scent from substantially dissipating
 until such time that release of said scent is deemed desirable
 is enclosure in a synthetic packaging.

10. The scent delivery system of claim 9, wherein:

said synthetic packaging is a vapor-barrier plastic.

11. A scent delivery system comprising:

a cup cap;
a scent source means.

12. The scent delivery system of claim 11, wherein:

said cup cap is of synthetic material;
said scent source means is an integral combination of
at least one essential oil integrally pervading said synthetic
material used in the production of said cup cap.

13. The scent delivery system of claim 12, wherein:

said scent delivery system is enclosed within means to prevent
said scent from substantially dissipating until such time that
release of said scent is deemed desirable.

14. The scent delivery system of claim 15, wherein:

means to prevent said scent from substantially dissipating
until such time that release of said scent is deemed desirable
is enclosure in a synthetic packaging.

15. The scent delivery system of claim 14, wherein:

said synthetic packaging is a vapor-barrier plastic.

16. A scent delivery system comprising:

eating utensils;
a scent source means.

17. The scent delivery system of claim 18, wherein:

said eating utensils are of a synthetic material;

said scent source means is an integral combination of
 at least one essential oil integrally pervading said synthetic
 material used in the production of said eating utensils.

18. The scent delivery system of claim 17, wherein:
 - said synthetic material is plastic;
 - said scent delivery system is enclosed within means to prevent
 said scent from substantially dissipating until such time that
 release of said scent is deemed desirable.
19. The scent delivery system of claim 19, wherein:
 - means to prevent said scent from substantially dissipating
 until such time that release of said scent is deemed desirable
 is enclosure in a synthetic packaging.
